PES Booth March 2025

MERGE

Challenge Question

How might we enhance VOXZOGO's presence at the PES Conference with an booth experience that encourages participation?

Insight

As growth plates gradually close, the window for effective intervention narrows, making timely, targeted treatment critical.

Room to Grow

We know Pediatric Endocrinologists love solving problems (and friendly competition). At our "Room to Grow" booth, they'll dive into a timed interactive quiz where they race against growth plate closure to secure a spot on the leaderboard—and win some great swag.

How it Works

- Dynamic LED screens challenge with questions on achondroplasia and VOXZOGO.
- Each question is timed to communicate the urgency of acting before growth plates fuse.
- On-screen visuals, complete with a visual timer, show how quickly that intervention window is closing, reminding docs that early action is key.

5

A gain-of-function mutation in which receptor most commonly underlies achondroplasia?

A stylized illustration of a human ribcage and spine, rendered in white and yellow outlines against a purple background. The ribs are clearly visible, and the spine runs down the center.

A Estrogen receptor alpha (ESR1) **B** Growth hormone receptor (GHR)

C Fibroblast growth factor receptor 3 (FGFR3) **D** Thyroid hormone receptor beta (THRB)

Sample Quiz Questions

Which best describes the characteristic skeletal presentation of achondroplasia?

- A. Proportionate short stature with uniform limb shortening
- B. Early closure of cranial sutures leading to microcephaly
- C. Epiphyseal overgrowth in the proximal long bones
- D. Disproportionate short stature with predominantly rhizomelic (proximal) limb shortening, a near-average trunk length, and frontal bossing

Answer: D. Disproportionate short stature with predominantly rhizomelic (proximal) limb shortening, a near-average trunk length, and frontal bossing.

A gain-of-function mutation in which receptor most commonly underlies achondroplasia?

- A. Estrogen receptor alpha (ESR1)
- B. Growth hormone receptor (GHR)
- C. Fibroblast growth factor receptor 3 (FGFR3), typically the G380R mutation
- D. Thyroid hormone receptor beta (THRB)

Answer: C. Fibroblast growth factor receptor 3 (FGFR3), typically the G380R mutation.

Regarding dosing frequency, which statement best characterizes VOXZOGO administration?

- A. It is administered intramuscularly once weekly, with dose escalation every 6 months
- B. It is administered subcutaneously once daily, typically with weight-based dose adjustments
- C. It is administered three times a week, alternating with growth hormone injections
- D. It must be given only during hospital visits under sedation due to infusion reactions

Answer: B. It is administered subcutaneously once daily, typically with weight-based dose adjustments.

VOXZOGO counteracts achondroplasia pathophysiology by:

- A. A. Directly stimulating pituitary secretion of growth hormone
- B. B. Activating C-type natriuretic peptide (CNP) signaling to oppose overactive FGFR3 at the growth plate
- C. C. Increasing systemic IGF-1 levels via hepatic stimulation
- D. D. Blocking parathyroid hormone-related protein (PTHrP) receptors in chondrocytes

Answer: B. Activating C-type natriuretic peptide (CNP) signaling to oppose overactive FGFR3 at the growth plate.

Insight

When you're introducing the only FDA-approved treatment for children with achondroplasia, subtlety won't do; we need to be bold to rise above the noise on the tradeshow floor.

Growing Together

We'll create a giant pop-up book experience that brings a child's journey with VOXZOGO to life. This immersive, eye candy combines the charm of child-like illustrations with clinically detailed insights, capturing attention and showing how this breakthrough therapy supports growth and new possibilities.

Giveaway Ideas

- Illustrated patient journey booklet
- Notebooks with an illustrated cover

Storyline

Lily is an infant who delights in exploring her little world, but achondroplasia means her bones grow more slowly than expected, making it harder for her to reach developmental milestones and keep up with her peers.

Recognizing these challenges, her doctor introduces VOXZOGO in infancy.

Thanks to her doctor's expertise and commitment to early intervention, Lily's journey transforms with measurable improvements.

Our pop-up book celebrates both Lily and the pivotal role of her doctor in shaping her future.

Insight

VOXZOGO data is impressive, but numbers don't tug at the heartstrings. To be memorable, we need a compelling story—one that shows how this breakthrough therapy changes lives.

Expanding Possibilities

Our “Expanding Possibilities” concept brings data to life using existing case study videos featuring Eve, Shawn, Miller, and Annika.

How it Works

- Brand ambassadors distribute accordion-style cards at the entrance (extras available at the booth).
- Each card expands—symbolizing how VOXZOGO broadens possibilities for children with achondroplasia—and directs attendees to the booth.
- At the booth, scanning the card at one of four LED screens instantly launches a case study video on the back wall, making real stories come to life.

Giveaway Idea

Expandable water bottle.

Expanding Possibilities—Alt

Our “Expanding Possibilities” concept takes you on a journey—from feeling cramped to experiencing true spaciousness—to show how VOXZOGO gives children with achondroplasia expanded possibilities in health and happiness..

Execution

- **Narrow Entrance (Constricted Zone)**
The booth starts with a constricted entrance that symbolizes the challenges of limited growth.
- **Threshold with Statement**
“It’s not just about adding inches. It’s about expanding possibilities.”
- **Open Interior (Expanded Zone)**
After you pass through the threshold, you enter an open space that symbolizes growth. Here, dynamic visuals highlight key information about VOXZOGO.

Narrow Entry

Threshold

“It’s not just about adding inches. It’s about expanding possibilities.”

Open Interior

Interactive/Educational Displays, Signage, Staff Engagement Space

Concept 2: Growing Together with VOXZOGO

We'll create a giant pop-up book that brings a patient's journey with VOXZOGO to life. This immersive narrative marries the charm of playful, child-like visuals with layered, clinically detailed insights to capture attention and show how this breakthrough therapy doesn't just add inches—it transforms lives.

Giveaway Ideas

- Illustrated patient journey booklet
- Notebooks with an illustrated cover

Expanding Possibilities

Our “Expanding Possibilities” concept brings data to life with heartfelt case study videos featuring Eve, Shawn, Miller, and Annika.

Execution

- Brand ambassadors hand out accordion cards at the conference entrance (with extra cards available at the booth).
- Each card “expands,” symbolizing how VOXZOGO broadens possibilities for children with achondroplasia and directs attendees to the booth.
- There, scanning the card on one of four specialized screens instantly launches our videos.

Concept 3: Expanding Possibilities—Alt

Our “Expanding Possibilities” concept takes you on a journey—from feeling cramped to experiencing true spaciousness to show how VOXZOGO gives children with achondroplasia expanded possibilities in health (and for organs).

Execution

Narrow Entrance (Constricted Zone)

The booth starts with a narrow, constricted entrance that symbolizes the challenges of limited growth.

Threshold with Statement

“It’s not just about adding inches. It’s about expanding possibilities.”

Open Interior (Expanded Zone)

After you pass through the threshold, you enter a wide, open space that symbolizes growth in every dimension. Here, dynamic visuals highlight key information about VOXZOGO.

Narrow Entry

Threshold

“It’s not just about adding inches. It’s about expanding possibilities.”

Open Interior

Interactive/Educational Displays, Signage, Staff Engagement Space

Concept 1: Room to Grow

We know Pediatric Endocrinologists love solving problems and a bit of friendly competition. At our "Room to Grow" booth, they'll dive into a timed interactive quiz where they race against growth plate closure to secure a spot on the leaderboard—and win some great swag.

Execution

- A dynamic LED screen challenges you with questions on achondroplasia pathophysiology and the mechanism of VOXZOGO.
- Each question is timed to echo the urgency of acting before growth plates fuse.
- On-screen visuals, complete with a visual timer, show how quickly that intervention window is closing, reminding docs that early action is key.

Copy: Growing Together with VOXZOGO WIP

Meet Lily! She's full of energy, loves to dance, and has a big imagination. Lily has achondroplasia, which means her bones grow a little differently.

Pop-Up Exploration

- Text: "Achondroplasia often involves a gain-of-function mutation in FGFR3, slowing bone growth."
- Interactive Element: A small tab that, when pulled, highlights Lily's disproportionately shorter limbs and rhizomelic shortening.

Because Lily's bones don't grow as fast, she sometimes finds it hard to reach her favorite books, explore new places, and keep up with friends.

Pop-Up Exploration

- Text: "Disproportionate growth can lead to reduced organ space, potential spinal stenosis, and limited mobility.."
- Interactive Element: A small lever shows normal vs. inhibited chondrocyte proliferation in a simplified bone cross-section. A note references respiratory considerations in achondroplasia.

Then Lily's doctor mentioned something new called VOXZOGO. She gets a little shot every day—just for kids like Lily. It can help her bones grow stronger and taller, while her growth plates are still open!

Pop-Up Exploration

- Text: "VOXZOGO is a C-type natriuretic peptide (CNP) analog that counteracts overactive FGFR3 signaling, promoting endochondral ossification."
- Interactive Element: A lever that, when moved, illustrates the FGFR3 pathway being 'balanced' by CNP.

Slowly but surely, Lily noticed changes. She could breathe a bit easier and run faster.

- Text: "By promoting proportional growth, VOXZOGO may improve thoracic capacity, reduce orthopedic complications, and enhance mobility."
- Interactive Element: A mini bar chart or reference to year-over-year improvements in linear growth and HRQoL metrics

Today, Lily dances and dreams even bigger dreams. She's excited to keep exploring—now that her bones can grow with her!

Pop-Up Exploration

- Text: "VOXZOGO is FDA approved for children of all ages with achondroplasia (and open growth plates), offering a new standard of care. Early intervention matters, as the effect on linear growth only persists while plates remain unfused."
- Interactive Element: Pull to reveal a take-home message: "Early intervention matters. Maximize the window before plate closure."

Key Objectives

- Design an innovative booth experience that encourages participation.
- Optimize the use of space.
- Incorporate key messaging.
- Include an interactive element for engagement.
- Provide a Treatment Guidelines Brochure for distribution.
- Define and measure the Most Valuable Action (MVA): likely signing up for information to funnel attendees to a rep.

Thank You
